August 2026

Dear Model Railroader,

Welcome to the Atlas Model Summer 2026 Catalog. We're proud to bring you all new announcements from our Master and Trainman lines. We hope that whether you are a dedicated Atlas follower or a new fan, that you continue to make us a part of the tradition of fantastic model railroading!

This catalog is part of the Atlas All Scales Series Catalogs—a lineup of dedicated catalogs across our product families, updated on a regular basis. Each edition supports the Atlas Pre-Order system. Before the Research & Development team gives the final go-ahead for production, Atlas announces upcoming products so customers can place advance pre-orders through their preferred Atlas Authorized Dealer.

This edition of our catalog includes announcements of prototypical N and HO locomotives including SD-35, H15-44/16-45 and U33/36B Locomotives. We're also announcing plenty of prototype accurate rolling stock including new HO Pullman Sleepers, N & HO scale Tank Cars, Plug Door Box Cars, Thrall Hoppers, Mobile Office Containers, and more.

While on the Atlas website, shop.atlasrr.com, be sure to peruse the "New Arrivals" pages to see what has recently arrived on Authorized Dealer shelves, or the In-Stock pages to see what is readily available from Atlas. Need to do some track work? Atlas has all the pieces you need - from straights to switches and everything in between! Atlas can also help outfit you with a full layout package - check out shop.atlasrr.com for more information. We also offer a full line of instructional guides if you're looking to start fresh with a brand new layout! For a complete listing of our books, visit our website or inquire at your local hobby shop. For assistance finding an Atlas Authorized Dealer near you, use our handy Dealer locator at: https://shop.atlasrr.com/storelocator.aspx.

Stay connected with everything happening at Atlas! Be the first to hear about the latest product news, exciting announcements, exclusive offers, and more. We have plenty of exciting updates on the horizon, and you won't want to miss them. To have the latest Atlas news delivered directly to your inbox, visit shop.atlasrr.com and sign up for the Atlas Insider email newsletter today.

Thank you for your interest and enthusiasm in the exceptional multi-scale product offerings produced by Atlas Model Railroad Company.

Happy Modeling,
Ross Medine
Sales Manager

A Letter From the General Manager

August 2026

One of the things that has always made model railroading so rewarding is that it never stands still. Advances in manufacturing, materials, and technology continually create opportunities to make our models more realistic, more reliable, and more enjoyable to own and operate. At Atlas, we believe every new product should build upon the successes of those that came before it.

Over the past several years, we've introduced a variety of enhancements to our HO Scale Master Line locomotives, including prototype-specific ditch lights, etched-metal windshield wipers, metal couplers on select models, and numerous model-specific refinements. While some of these improvements have been subtle, each has reflected our ongoing commitment to increasing prototype fidelity and operating performance.

Beginning with the products available for pre-order in this catalog, we're pleased to announce another important step forward. Metal couplers are now standard on all HO Scale Master locomotives and rolling stock. This has been one of the most frequently requested improvements from our HO customers, and thanks to continued advancements throughout our global supplier network, we're now able to make this enhancement part of every future Master Line release.

We're equally excited to introduce another significant upgrade to our HO Scale Master Gold Sound Equipped locomotives. Future releases will feature factory-installed ESU passive radiator speakers, providing richer, fuller sound with improved bass response and greater realism. Whether it's the deep rumble of a prime mover or the sharp blast of a locomotive horn, we believe you'll notice the difference the first time you put one on the rails.

Our commitment to innovation extends beyond HO Scale. As an N scaler myself, I'm especially excited about Atlas' recent acquisition of Micro-Trains Line and the opportunities it creates for the future. Looking ahead, our goal is to incorporate additional premium features—including metal wheels and Micro-Trains 1015-style couplers—into future Atlas Master and Micro-Trains products whenever practical. Because these improvements involve multiple manufacturing partners and a global supply chain, they will be introduced gradually as production schedules allow, ensuring we continue delivering new products without unnecessary delays.

These enhancements represent more than new specifications—they reflect Atlas' ongoing commitment to listening to our customers and continually improving our products. Whether you're an HO or N Scale modeler, you can expect Atlas to keep investing in the quality, performance, and realism that have defined our products for generations. We appreciate the trust you place in our products and look forward to bringing you even more exciting innovations in the years ahead.

Sincerely,
Matt Moceikis
General Manager
Atlas Model Railroad Co., Inc.

Primarily used for heavy-haul road freight service throughout the US, the C-628 generated a total of 2,750 hp, and was part of the American Locomotive Company's (ALCO) Century Locomotive Line. A total of 185 units were built by ALCO for railroads in the US, Mexico and Australia between 1963 and 1968. During 1965 Alco started producing the 3,000 hp. Century 630 Locomotive. It was produced concurrently with the 2,800 hp. C-628, but it incorporated an advanced GE a.c. traction alternator which provided the extra 200 hp. The most distinctive spotting feature of the C-630 is the large aftercooler radiator housing which extends above the roofline. The C-630 also featured a modified cab which offered more interior space for the crew. Through the end of production in the late 1960s, a total of 133 units were produced for railroads in the US and Canada.

Between 1964 and 1966, EMD built a total of 360 six-axle 2,500hp SD35 locomotives. An additional 35 steam generator-equipped SDP35 locomotives were also built during this period. These were all part of EMD's "35-Series" which also featured the four-axle, 2,250hp GP35 locomotive. All locomotives included the standard EMD 567-series prime mover. A stock model weighed 360,000 pounds, but many roads chose to add weight to increase the locomotive's tractive effort. From the mid-1960s through the 1980s, the SD-35 could be found in road service on both large and mid-sized roads across the US. Today the number of active units has dwindled to a select few, including those operated by regional railroad Montana Rail Link.

Features:

- Directional lighting
- Walkway safety tread
- Blackened metal wheels
- Factory-equipped with AccuMate® knuckle couplers
- Painted handrails
- Golden-white LEDs

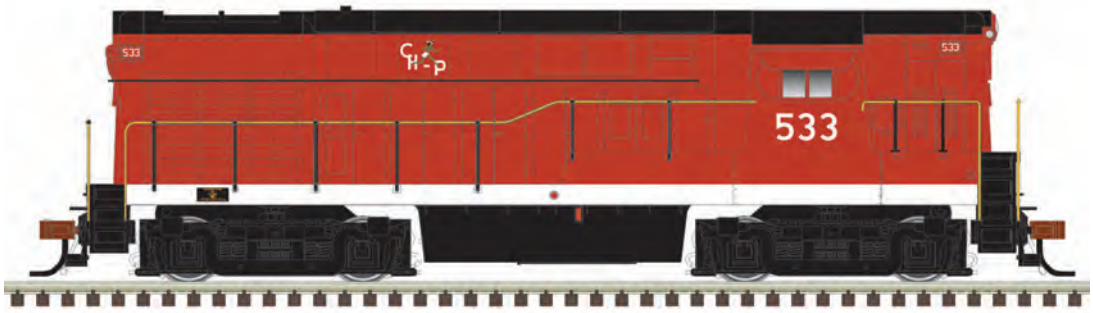
Chihuahua al Pacifico 532



Chihuahua al Pacifico 533

In the late 1940s, the design team at Fairbanks-Morse (FM) set out to develop an 8-cylinder 1,500-horsepower all-purpose road switcher using their opposed-piston diesel engine design. By September 1947 FM had produced the first H15-44 locomotive in the form of Demonstrator "FM 1500". The hood-unit style body included distinctive features such as slightly sloped ends, rounded corners, oval cab-side windows and a raised, rounded headlight base on each end.

The first purchaser of the H15-44 was Monon, who quickly bought both the demonstrator and the second unit built in December 1947. Three units were then built for Rio Grande before additional demonstrators were produced later in 1948. Before production ended in mid-1949, a total of 35 units had been built, with Jersey Central owning the most units (14 total).

By 1950 other builders had increased the horsepower of their competing road switchers, and FM responded with the 8-cylinder 1,600-horsepower H16-44 model. The earliest units were externally very similar to the previous H15-44. MKT 1591 was initially ordered as an H15-44, but was upgraded to 1,600hp during production.

The first true production H16-44s were ordered by Jersey Central. Several large railroads purchased this model, including Santa Fe, New York Central, Southern and Pennsylvania. A total of 99 units would be produced before production of the "phase I" version ended in December 1952. FM continued to produce H16-44s with phase II and III body styles through 1963.

The horsepower race was in full swing by the late 1960s when GE introduced the 3,300hp, four-axle U33B locomotive. 137 units were produced between September 1967 and August 1970 when production ended. GE upped the horsepower ante in 1970 with the introduction of the 3,600hp U36B which was produced between May 1970 and December 1974. Both models were externally identical, and internally they were both powered by the same GE FDL-16 cylinder four-stroke engine. The horsepower increase was achieved through adjustments to the fuel rack settings and other internal component changes. One key spotting feature of both models was the built-out radiator "wings" on the long hood.

Atlas' U33B and U36B model is being offered in both an early and late phase. The early phase model includes flushmounted radiator screens and air intake screens on the long hood. In addition, there is a built-out area on the top of the front and rear pilots. Late phase models include corrugated radiator and air intake screens, with a flat pilot face. An optional separate electrical equipment box is included on the left side walkway behind the cab per the prototype. AAR-B or Blomberg trucks are used when appropriate.

Features:

- Factory-installed AccuMate® magnetic knuckle couplers
- Blackened metal wheels
- Accurate painting and lettering
- Optional separate electrical equipment box will be included on the left side walkway behind the cab
- per the prototype
- AAR-B or Blomberg trucks will be used when appropriate
- Atlas Master® Silver version is Sound Ready and equipped with speaker for easy conversion to DCC sound
- Atlas Master® Gold version features ESU LokSound Decoder

The Thrall Car 2743 cubic foot gondola was introduced in 1995. This new 52' 6" interior length design was in response to the newly allowed increase in Gross Rail Loading (GRL) to 286,000 lbs (up from 263,000 lbs). This allowed an increase of the inside height from the previously standard 5'0" to a new standard of 5'6", giving it a 2,743 cubic foot capacity. Thrall produced over 6,700 of these from 1995 to 1999. The design resumed production under Trinityrail in 2005.

Features:

- Prototypical scale height reflecting the new higher capacities standard.
- Fourteen side posts
- Separate ladders
- Detailed stirrups
- Accurate painting and lettering
- Ready-to-run

The Atlas model of the 20,700 gallon tank car was introduced in the mid-Sixties by General American Transportation Corporation, more commonly known simply as GATX. The design is a general-purpose, non-insulated, non-pressure tank car. The Atlas model recreates two major saddle variations (Type 10 and Type 20) and two top platform variations (one- and two-piece). The more common products carried in this tank car were tallow, animal fat, fuel oil, diesel fuel, vegetable oil, soybean oil, fertilizers, lubricating oil, waste oil, and glycol.

Features:

- Detailed five section non-insulated body
- Two saddle variations (Type 10 or 20)
- Detailed top platform with two options (one- or two-piece)
- Bottom outlet
- Safety vent
- Manway
- Control housing
- Stuffing box
- Safety rails
- Correct lettering to prototype cars
- Detailed brake gear and pipes
- See-through end walks

From 1975 to 1980 National Steel Car built over one-thousand 50'6" single-plug door box cars. Most of the 100-ton cars went to Canadian railroads primarily for paper service. Two hundred 70-ton cars went into food service for the Grand Trunk Western. the models have a number of variations corresponding to the prototype.

Features:

- Bodies: 5111 or 5277 cubic foot styles
- Ends: Nine or ten corrugations
- Painted safety rails
- Doors: 9ft or 10ft plug doors
- Side Sills: Deep or shallow sills
- Trucks: 70- or 100-ton

In late 1991, Norfolk Southern debuted the first two prototypes of its TOP GON® re-body program. Looking for a way to expand the capacity and the longevity of its coal car fleet, this program took in old hoppers, stripped them to the frame, and built an entirely new gondola body on top of that frame. With production starting in July of 1992, spanning multiple classes with multiple variations, NS' Roanoke East End Shops churned out over 18,000 of these cars, ending production in 1998. With almost 3,265 of class G-85R, G-86R and G-88R's in service, this model represents one of NS' most recognizable freight cars.

Features:

- Ready-To-Run
- Injection-Molded Plastic
- Fine-Scale Detail
- Etched-Metal Brake Wheel Platforms
- Installed Internal Bracing
- Knuckle couplers

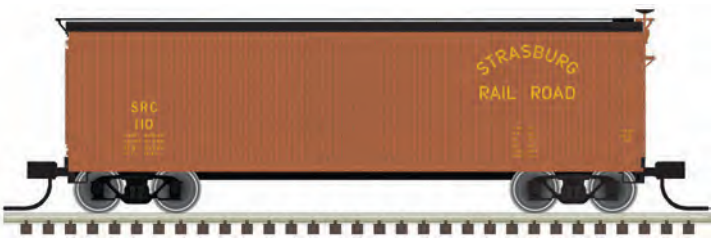
Reading (Fire Car)



Strasburg Railroad

The original USRA (United States Railway Administration) design box cars date from World War I when car designs began to be standardized. The double sheathed version was the first widely accepted 40-foot steel underframe box cars placed in service. Some 24,500 cars were delivered to 24 different railroads throughout the country.

Features:

- 5-5-5 or 7-8 steel ends
- Fishbelly or standard center sill
- Vertical or end mounted brakes
- Steel or wood doors

The pulpwood car was designed out of necessity, as previous logging style cars were rebuilt out of boxcars or gondolas. The new design made it easy to haul tree trunks, branches, and other cuts stacked in rows of two (With the ends facing out) between two bulkheads bracketing each end. The Atlas 50' Pulpwood Car was modeled after a SIECO design, with over 800 delivered in the early 1979's to the Southern Railway, alone. Over time, as demand for pulpwood at mills has slowly decreased, these cars still serve a vital purpose, hauling logs, telephone poles, and other long objects lengthwise between the two bulkheads. The Atlas 50' SIECO Pulpwood Flat would fit in on your railroad hauling more pulpwood to the mill or bringing a load of logs out of the forest to be cut down.

Features:

- Crisp painting and printing
- Durable body
- Free rolling trucks
- Detailed brakewheel
- Knuckle couplers

To fulfill the need for portable, on demand office space at construction sites, railroad yards and many other places, companies began offering purpose-built and/or converted shipping containers for rent. These containers were fitted with office interiors, entrance/exit doors, lighting as well as air conditioning and other creature comforts. They are very versatile and are seen virtually everywhere. This Atlas model replicates a typical 40-foot version of the purpose-built office container.

Features:

- Accurate Doorway, Window and Light Fixture detail
- Separately applied parts include air conditioner units and electrical equipment
- Crisp Painting and Decoration

Atlas' Ford F-250 Crew Cab and F-350 Standard Cab Work Trucks faithfully represent two of the common configurations of this popular pickup found in general service roles from the 1990s through the mid-2010s. The F-250 4 door Crew Cab has dual fuel doors, an 8-foot bed, and 4x4 styling, while the F-350 features a dual rear wheel configuration supporting a common aftermarket storage bed design and includes photo-etched extended-vision mirrors and an equipment rack.

Offered in matched pairs, these hard-working trucks are perfect for layouts based around the 1990s through present day.
Features:

- Officially Licensed
- Prototypical trim packages (XL, XLT)
- Accurate design and detailing
- Pre-colored interiors and semi-detailed chassis
- Sold as a set of one of F-250 and one F-350

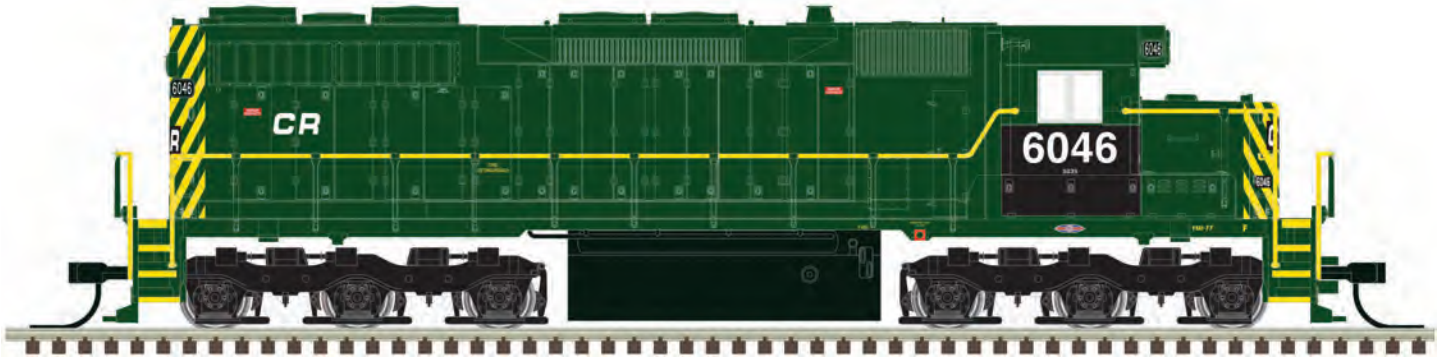
Atlas Master® N SD-35 Locomotive - Central Railroad of New Jersey

Atlas model rendering
Central Railroad of New Jersey 2503



Atlas model rendering
Conrail 6046 (ex-Jersey Central)

The Central Railroad of New Jersey acquired 12 EMD SD35 locomotives in 1965, and were used all over the CNJ system. All 12 locomotives were painted in CNJ's iconic yellow and green paint scheme, with a yellow silhouette of the Statue of Liberty on the cab. Later on, CNJ was acquired by Conrail who kept using these locomotives until 1985, when a majority of the SD35 fleet was retired, and was traded into EMD.

Atlas Master® HO U36B - Nashville & Eastern

Atlas model rendering
Nashville & Eastern 5772

When Nashville & Eastern Railroad (NERR) No. 5772 arrived on the property in the 1990s, it immediately stood out as one of the railroad's most unusual locomotives. Built by General Electric in October 1971 as Seaboard Coast Line No. 1820, it was part of the largest fleet of U36Bs ever assembled. The U36B was GE's most powerful four-axle locomotive of the Universal series, producing 3,600 horsepower from a 16-cylinder FDL diesel engine. Although the model offered impressive horsepower and good high-speed performance, only 125 U36Bs were built, making it one of GE's rarer road-switcher designs.

Following the merger of Seaboard Coast Line into the Seaboard System and later CSX Transportation, the locomotive retained its place in the fleet and was renumbered 5772 during CSX's system-wide renumbering program. As CSX modernized its roster with newer Dash 8 and Dash 9 locomotives, many of its older U-series locomotives were sold to regional and short-line railroads. Among those buyers was the Nashville & Eastern Railroad, which acquired the locomotive and kept the CSX road number, making it NERR No. 5772. On the Nashville & Eastern, 5772 became a familiar sight hauling freight over the former Tennessee Central Railway east of Nashville. It frequently worked alongside the railroad's fleet of secondhand GE locomotives, including U30Bs, B23-7s, B39-8s, and C30-7s. Its distinctive flared radiator section and unmistakable U-series profile made it a favorite among railfans, especially because so few U36Bs remained in regular service by the 2000s.

As the years passed, maintaining a first-generation GE locomotive became increasingly difficult. Parts grew scarce, and newer locomotives offered better fuel economy and reliability. Despite these challenges, 5772 continued serving the railroad well into the early 2010s, becoming one of the last operating U36Bs in North America. After more than four decades of service that spanned three railroad owners, the locomotive was retired and scrapped in December 2013. Although it was not preserved, NERR 5772 is remembered as one of the final representatives of a rare GE model and as an iconic part of the Nashville & Eastern's colorful fleet of veteran locomotives.

Atlas Master® HO Pullman 12-1 Sleeper Car - Great Northern (University of Minnesota Heart Research)

Pullman 12-1 Sleeper Car - Great Northern (University of Minnesota Heart Research)

From 1923 through 1930, Pullman produced nearly 1000 cars of the 12-1 sleeper (Pullman Plan 3410 and variants) for every major US passenger railroad. Many of these cars underwent updates to different classes during their service lives based on specific railroad needs, such as conversion to "value oriented" tourist sleepers or the unique 13-section sleepers required for troop movements for World War II.

Once such car from lot 4894, originally built to plan 3410A on August 1 1925, had an especially unique history.
"Red Granite" was initially used in general service until it was permanently assigned to the Union Pacific Portland Rose premier train in 1930, when the car was renamed "Premier Rose", receiving air conditioning in 1935. The car was "purchased" by Great Northern at the Pullman divestiture in 1948, where it took on car number 1018, eventually being withdrawn officially from Pullman leasing on March 20, 1957.

At this time, the University of Minnesota leased the car from GN for use in a cutting-edge research program studying risk factors for heart disease. This car was painted in the University of Minnesota school colors and converted into a mobile diagnostic and testing lab. This study was conducted on over 2500 railroad workers across the country and spectrum of job and physical activity from 1957 through at least 1967, when the car was again withdrawn from lease in January of 1968, becoming work car O-3382. The US Railroad Study, as it was known, continued with followups into the 1970s, and the results have been important in identifying risk factors for coronary heart disease which are still being used today.

Atlas Trainman® HO 2-Bay Offset Side Hopper - Central Railroad of New Jersey

2-Bay Offset Side Hopper - Central Railroad of NJ

From "big brother", well sort of.

The Central Railroad of New Jersey (CNJ) in its later years was a large customer of United States Railway Leasing Company (USLX). Which made sense for the struggling CNJ at the time. Instead of maintaining and rebuilding its own cars, which is very expensive the CNJ opted to lease. The bank data on the top left side of the car is the giveaway that this was a USLX leased car. Ironically the subject leased 2-bay offset hoppers of the CNJ 61000 class were former Baltimore & Ohio (B&O) cars. The B&O railroad was the majority interest owner of the CNJ. The B&O was jokingly referred to as "big brother" due to this corporate hierarchy and control within the CNJ. Even CNJ locomotives would be painted with the B&O's blue and yellow corporate colors in the later years. The B&O's relationship with the CNJ benefited both sides. The B&O provided enough capital to keep the CNJ going, while the CNJ gave precious trackage rights into the New York City market to the B&O.

	TOTAL PIECES ORDERED				

The General Electric U30C locomotive was put into production in 1966, replacing the similar looking U28C. Offering 200 more horsepower than its predecessor, the U30C allowed GE to compete with the EMD's SD40 in the horsepower race. The U30C proved to be very popular, selling 600 units during its 10 year production span, making it the best selling Universal Series GE locomotive.

This new model from Atlas represents a Phase 1 U30C. The primary spotting feature is constant width long hood (later phase models featured a wider radiator section), as well as various radiator intake arrangements. Note that Atlas also offers the later Phase 2 and Phase 3 models, so the Phase 1 allows you to select the most accurate U30C for your favorite railroad.

Features:

- Etched metal grilles.
- Several cab, headlight and nose light variations to accurately match the prototype.
- Separately applied details parts.
- ***NEW Metal couplers***
- Atlas Master® Silver version is Sound Ready and equipped with speaker for easy conversion to DCC sound
- Atlas Master® Gold version is sound-equipped
- ***NEW Atlas Master® Gold version features factory-installed ESU passive radiator speakers***

Between 1964 and 1966, EMD built a total of 360 six-axle 2,500hp SD35 locomotives. An additional 35 steam generator-equipped SDP35 locomotives were also built during this period. These were all part of EMD's "35-Series" which also featured the four-axle, 2,500hp GP35 locomotive. All locomotives included the standard EMD 567-series prime mover. A stock model weighed 360,000 pounds, but many roads chose to add weight to increase the locomotive's tractive effort. From the mid-1960s through the 1980s, the SD-35 could be found in road service on both large and mid-sized roads across the US. Today the number of active units has dwindled to a select few, including those operated by regional railroad Montana Rail Link. Atlas' model incorporates many of the subtle details that differentiated the various SD-35 production phases. This includes the detail of the engine air intake, dust bin, radiator screens, radiator fans, fuel tanks and battery boxes. Other options include a low vs. high nose, and a low nose with our without a standard-style headlight.

Features:

- Realistic die-cast underframe
- Five-pole skewed armature motor with dual flywheels for optimum performance at all speeds
- Golden-white LEDs
- Directional lighting
- Detailed cab interior with crew
- Separately-installed scale windshield wipers, metal grab irons and fine scale handrails
- Marker lights with separate lenses
- Scale fans and grille detail
- Flat dust bin or raised dust bin as appropriate by railroad
- Snowplow (included but not installed)
- ***NEW Metal couplers***
- Atlas Master® Silver version is Sound Ready and equipped with speaker for easy conversion to DCC sound
- Atlas Master® Gold version is sound-equipped
- ***NEW Atlas Master® Gold version features factory-installed ESU passive radiator speakers***

Gold models are equipped with ESU LokSound and feature factory installed ESU passive radiator speakers.

DCC Operation Features GOLD LOCOMOTIVES ONLY)
- Supports all DCC-programming modes
- DCC includes RailCom and RailComPlus, with 14, 28 or 128 speed steps and with 2-digit and 4-digit addressing.
- Flexible mapping of function keys F0 to F28.
- A total of 6 DCC function outputs are available, all can be function mapped (disable, brightness, light effects) individually
- Follows all NMRA DCC standards and recommended practices.

ESU LokSound Features (GOLD LOCOMOTIVES ONLY):
- Over 20 sound effects are available, including engine start-up and shutdown, prime mover sounds through all eight notches, bell, air horn, air compressor, dynamic brakes and more.
- There are up to 16 user-selectable horns, 2 user-selectable bells, and 2 user-selectable synchronized brake squeals.
- Manual and Automatic Notching modes with the ability to change modes "on the fly" are provided for true realism.
- Equipped with ESU's Exclusive "Full Throttle" features for ultimate realism in prototype running.

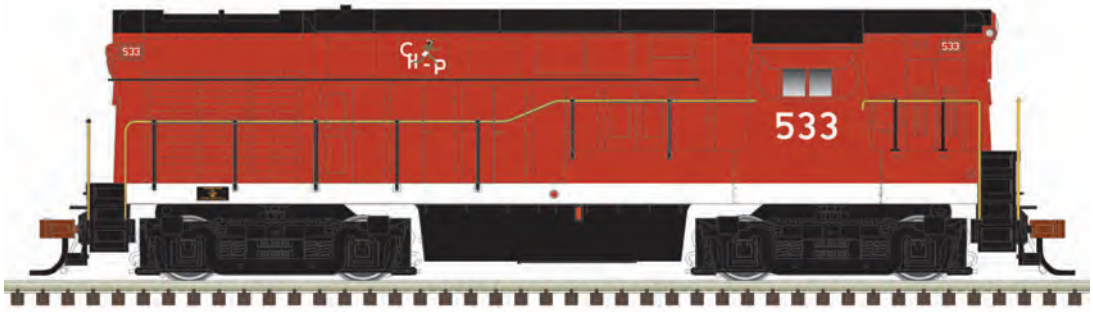
Chihuahua al Pacifico 532



Chihuahua al Pacifico 533

In the late 1940s, the design team at Fairbanks-Morse (FM) set out to develop an 8-cylinder 1,500-horsepower all-purpose road switcher using their opposed-piston diesel engine design. By September 1947 FM had produced the first H15-44 locomotive in the form of Demonstrator "FM 1500". The hood-unit style body included distinctive features such as slightly sloped ends, rounded corners, oval cab-side windows and a raised, rounded headlight base on each end.

The first purchaser of the H15-44 was Monon, who quickly bought both the demonstrator and the second unit built in December 1947. Three units were then built for Rio Grande before additional demonstrators were produced later in 1948. Before production ended in mid-1949, a total of 35 units had been built, with Jersey Central owning the most units (14 total).

By 1950 other builders had increased the horsepower of their competing road switchers, and FM responded with the 8-cylinder 1,600-horsepower H16-44 model. The earliest units were externally very similar to the previous H15-44. MKT 1591 was initially ordered as an H15-44, but was upgraded to 1,600hp during production.

The first true production H16-44s were ordered by Jersey Central. Several large railroads purchased this model, including Santa Fe, New York Central, Southern and Pennsylvania. A total of 99 units would be produced before production of the "phase I" version ended in December 1952. FM continued to produce H16-44s with phase II and III body styles through 1963.

The horsepower race was in full swing by the late 1960s when GE introduced the 3,300hp, four-axle U33B locomotive. GE upped the horsepower ante in 1970 with the introduction of the 3,600hp U36B which was produced between May 1970 and December 1974. Both models were externally identical, and internally they were both powered by the same GE FDL-16 cylinder four-stroke engine. The horsepower increase was achieved through adjustments to the fuel rack settings and other internal component changes. One key spotting feature of both models was the built-out radiator "wings" on the long hood. Atlas' U33B and U36B model is being offered in both an early and late phase. The early phase model includes flushmounted radiator screens and air intake screens on the long hood. In addition, there is a built-out area on the top of the front and rear pilots. Late phase models include corrugated radiator and air intake screens, with a flat pilot face. An optional separate electrical equipment box is included on the left side walkway behind the cab per the prototype. AAR-B or Blomberg trucks are used when appropriate.

Features:

- AAR-B or Blomberg trucks will be used when appropriate
- Separately-applied scale detail parts include: windshield wipers, metal grab irons, and more!
- Five pole skewed armature motor with dual flywheels for optimum performance at all speeds
- Directional lighting with Golden-white LEDs
- Blackened metal wheels
- ***NEW Metal couplers***
- Atlas Master® Silver version is Sound Ready and equipped with speaker for easy conversion to DCC sound
- Atlas Master® Gold version is sound-equipped
- ***NEW Atlas Master® Gold version features factory-installed ESU passive radiator speakers***

The Atlas model of the 20,700 gallon tank car was introduced in the mid-Sixties by General American Transportation Corporation, more commonly known simply as GATX. The design is a general-purpose, non-insulated, non-pressure tank car. The Atlas model recreates two major saddle variations (Type 10 and Type 20) and two top platform variations (one- and two-piece). The more common products carried in this tank car were tallow, animal fat, fuel oil, diesel fuel, vegetable oil, soybean oil, fertilizers, lubricating oil, waste oil, and glycol.

Features:

- ***NEW Metal couplers***
- Detailed five section non-insulated body
- Two saddle variations (Type 10 or 20)
- Detailed top platform with two options (one- or two-piece)
- With A-end pipe stubs (where applicable)
- See-through end walks
- Bottom outlet
- Manway
- Stuffing box
- Detailed brake gear and pipes
- Safety vent
- Control housing
- Safety rails

From 1975 to 1980 National Steel Car built over one-thousand 50'6" single-plug door box cars. Most of the 100-ton cars went to Canadian railroads primarily for paper service. Two hundred 70-ton cars went into food service for the Grand Trunk Western. the models have a number of variations corresponding to the prototype.

Features:

- *NEW Metal couplers*
- Bodies: 5111 or 5277 cubic foot styles
- Ends: Nine or ten corrugations
- Doors: 9ft or 10ft plug doors
- Side Sills: Deep or shallow sills
- Corner Posts: A special limited run of the Grand Trunk Western cars without the corner posts will be available.
- Trucks: 70- or 100-ton
- Suggested minimum radius of 22"

In late 1991, Norfolk Southern debuted the first two prototypes of its TOP GON® re-body program. Looking for a way to expand the capacity and the longevity of its coal car fleet, this program took in old hoppers, stripped them to the frame, and built an entirely new gondola body on top of that frame. With production starting in July of 1992, spanning multiple classes with multiple variations, NS' Roanoke East End Shops churned out over 18,000 of these cars, ending production in 1998. With almost 3,265 of class G-85R, G-86R and G-88R's in service, this model represents one of NS' most recognizable freight cars.

Features:

- ***NEW Metal couplers***
- Ready-To-Run
- Injection-Molded Plastic
- Fine-Scale Detail
- Etched-Metal Brake Wheel Platforms
- Installed Internal Bracing

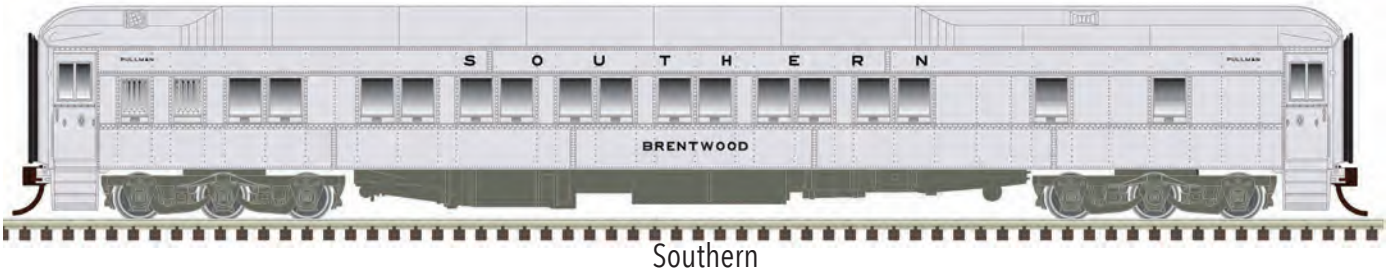
Pullman



Southern

Union Pacific

Sectional Pullman sleepers were the mainstay of most long-distance trains, as they could carry more passengers at lower fares (and higher operating profit per car) than cars which offered private compartments and drawing rooms. A section accommodating 3 people consisted of two seats facing each other with a drop-down berth above, separated from the common center aisle by a heavy curtain at night. The most ubiquitous sectional floor plan that Pullman offered was the 12-1 sleeper, consisting of 12 sections and one private drawing room usually marketed for family travel as it had its own restroom and sink, and could comfortably sleep 2 adults and 2 children. Approximately 1000 cars of Plan 3410 (and minor variants) were produced between 1923 and 1930, following nearly 4500 cars of the earlier plan 2410, making the 12-1 the single largest class of Pullman heavyweight sleepers ever produced.

The 36′ reefer is a highly detailed model of the car that was a mainstay in the meatpacking industry during the steam era. Based upon cars built by the General American Car Company for the Cudahy Packing Co. in 1925, the 36′ wood reefer is representative of the thousands of cars that transported meat, dairy, beer and food products well into the 1960's.

Features:

- *NEW Metal couplers*
- Accurate painting and lettering
- Separately-applied grab irons, ladders and stirrups
- Two different hatch styles - road name specific
- Truss rods appropriate per road name
- Separately-applied door hardware
- Opening hatches and doors
- Die-cast chassis
- Detailed braking system
- 40-ton Bettendorf-style trucks

This model is based upon the typical RBL class of insulated box cars that were used to carry canned goods that required protection from extremes of temperature, but not refrigeration. These cars had neither ice bunkers nor cooling units.

Plug-style doors were normally used to ensure a tight seal in the insulation. Designed for transport of both perishables and large loads, plug doors allowed box cars to be sealed from outside dust and dirt. These units are painstakingly designed to provide many hours of optimum, smooth performance and hours of modeling enjoyment.

Features:
- Prototypical painting and lettering
- AccuMate® couplers
- Roller-bearing or friction-bearing trucks where appropriate
- And more!

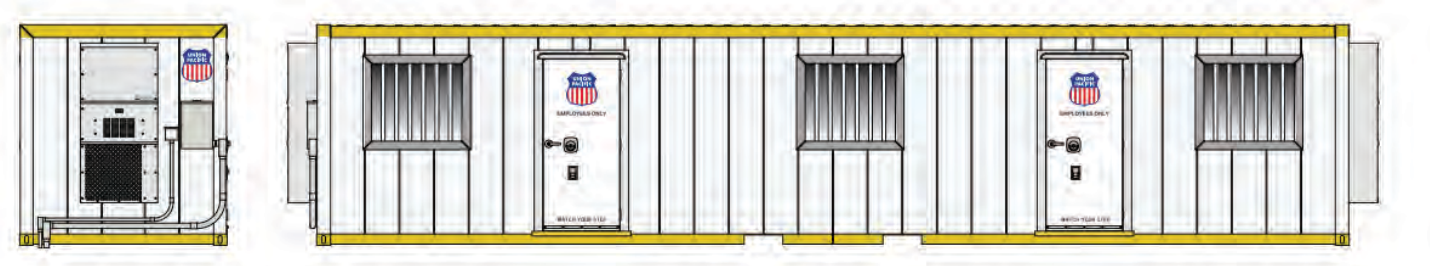
To fulfill the need for portable, on demand office space at construction sites, railroad yards and many other places, companies began offering purpose-built and/or converted shipping containers for rent. These containers were fitted with office interiors, entrance/exit doors, lighting as well as air conditioning and other creature comforts. They are very versatile and are seen virtually everywhere. This Atlas model replicates a typical 40-foot version of the purpose-built office container.

Features:

- Accurate Doorway, Window and Light Fixture detail
- Separately applied parts include air conditioner units and electrical equipment
- Crisp Painting and Decoration



Union Pacific

Put Your Trains on the Right Track!

With time tested, modeler approved Atlas HO & N scale track!

Whether you're finishing an existing layout, starting a new one, or just giving that trainset loop some extra pieces, Atlas has the 'right track' for you. The rugged plastic construction, nickel silver rail and U.S. prototype detail, assures longevity, maximum conductivity and accurate realism that guarantees your trains look good and keep running smoothly. Atlas track provides industry leading **quality** at unequaled **value**, and our **selection** is so large we have an entire catalog devoted to it. HO and N scale track, in a variety of rail sizes, is fully stocked and ready to ship to you and your favorite Atlas authorized dealer now. For more information, and the dealer nearest you, visit shop.atlasrr.com and request a catalog of your own. And remember...*You're on the right track...with Atlas!*

HO SCALE TRACK

HO True-Track®

Atlas HO True-Track® has true-to-life gray graveled roadbed, correctly angled roadbed shoulders and features Atlas Code 83 Snap-Track®.

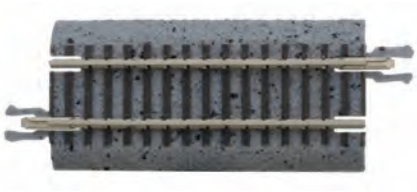
HO Code 83

Atlas HO Code 83 track features prototypically-fine brown ties and nickel silver rail, and not only looks realistic but is incredibly reliable.

HO Code 100

Atlas HO Code 100 track features black injection molded plastic ties and solid nickel silver rail, and is suitable for all skill levels.

N SCALE TRACK



N True-Track®

Atlas N True-Track® features Code 65 rail & dark brown ties with prototypical spacing and is now improved with true-to-life gray graveled roadbed making it even more realistic!

N Code 55

Atlas N Code 55 track features simulated wood brown ties and smaller nickel silver rail, and is praised for its superior design and ease of use.

N Code 80

Atlas N Code 80 track features black ties and nickel silver rail, and is built to last for ultimate performance.

ATLAS SUPER-FLEX® TRACK

- Item #168 HO Code 100 Super Flex Track
- Item #500 HO Code 83 Super Flex Track
- Item #2000 N Code 55 Super Flex Track
- Item #2500 N Code 80 Super Flex Track

Invented and patented by Atlas founder Stephen J. Schaffan Jr., this innovative, finely engineered precision track is the first choice of experts who demand the best. Easy to install, Super-Flex Track® enhances the realism of your layout. Unlike other flexible track which can become inflexible and kink, Atlas' Super- Flex Track® can be formed and re- formed with ease to achieve the desired shape. This unique track can be shaped to form curves of any radius, is ideal for spiral easement curves and is easily manipulated to help you make your layout vision a reality.
